

## Transformer Repair Service Solution

---

The ABB transformer care program ensures your transformers are operating at optimal performance. With our unique processes of investigation, detection, prevention, and damage limitation, ABB can ensure maximize utilization.

The ABB Life Assessment program which is the cornerstone of our full service program delivers an assessment of the health, fitness and life expectancy of the transformer. The result is that the right capital expenditure decisions can be made. ABBs unique diagnostics tools, drawing on its global design library, are in the position to provide an assessment of the health, fitness and life expectancy of the transformer, quantify the impact of changes in operating condition, and ensure the correct decisions regarding overloading.

*Prevention is the best cure*

## Total service solutions

---

ABB's service capabilities are unparalleled. If your transformer needs to be repaired, come to the original equipment manufacturer. From removal to installation, ABB has the team, the equipment and the solutions to provide ambulatory transformer care. Who within the industry can put equipment, people, resources, and solutions on your job site to ensure that your transformer is functional on the date promised? ABB are the logistics experts.
