

LV drive reconditioning and repair at ABB drive service workshops

ABB understands the importance of constant availability of drives for your business. When equipment fails, it causes costly downtime and ad hoc repair. That is why ABB drive service workshops offer you high-quality reconditioning and repair services. ABB has vast know-how on diagnostics and thorough understanding of the latest multi-level testing processes and maintenance technologies. Those, combined with the practical experience of ABB's specialists, ensure consistent practises to maintain your drive in any authorized ABB drive service workshop.

ABB's global network of drive service workshops provides consistent high-quality services with equal warranty in any authorized ABB drive service workshop.

Recondition service

Due to aging of components the probability of component and system failures increases in course of time. These failures result often in production losses, consequential damages and costly repair.

ABB recommends regular maintenance of AC drives throughout their lifetime to ensure maximum availability and to eliminate ad hoc repair costs. Maintenance consists of annual drive inspections and component replacements according to a product specific maintenance schedule.

ABB recommends reconditioning of drives in authorized ABB drive workshops. If that is not possible, ABB offers preventive maintenance to be performed on site.

Benefits of recondition service

An authorized ABB drive service workshop is an ideal place to perform maintenance

- 12-month warranty to the whole drive
- Updating to the latest version

Product Lifecycle Services

- Installation & Commissioning
- Training
- Support & Remote Services
- Spare Parts & Repairs
- Maintenance & Field Services
- Migration & Retrofits
- Optimization

SP36 EN REVD 2008

Service notes

Repair service

Benefits of repair service

- Updating to the latest version
- Genuine factory-certified parts

Service provided

ABB's drive service workshop repair service contains:

- Visual inspection
- Cleaning
- Thorough fault-finding analysis
- Replacement of parts based on the results of the fault-finding analysis
- Functional testing

A report is provided on each serviced drive. This report provides valuable information for identifying and troubleshooting plant conditions that may cause or contribute to current or future failures.

If the age or condition of a drive requires, reconditioning of the drive is quoted together with repair.

Repair and maintenance time

After your drive has arrived in an authorized ABB drive service workshop, a repair and maintenance quotation is sent in four working days. Drives are repaired and maintained in 5-10 working days from receiving an order. If shorter delivery times are required, ask for exchange units.

If the drive turns out to be irreparable, we inform you about it without delay and offer alternative solutions.

Warranty

The warranty on work and service parts is six months.

Note that ABB grants a twelve-month warranty on the whole drive if it is reconditioned as recommended by ABB.

Drive service workshop network
