

Case Study; Tracked undercarriages for earth-moving machinery

“The rise in productivity has made it possible to better study the machine cycle, with more accurate computation of production timing and manufacturing rates.”

Marco Balducci, manager automatic machinery installation and maintenance, Berco

Client

- Berco, Italy

Application

- Material handling
- Hot forming

System installed by ABB Italy

Key Drivers & Benefits

- ✓ New technical skills and enhancement of operators' level of preparation
- ✓ Improved process quality in terms of productivity, costs and safety
- ✓ More accurate computation of production timing and manufacturing rates
