

# Traction Transformers

## Match any challenge

An all-round provider: technological know-how, expertise and true competence

ABB Traction Transformers meet the demands of the physical constraints of the locomotive's environment, optimizing the available space to the maximum. Our transformers have more than proven themselves in the most extreme environmental conditions from deserts to icy plains - worldwide. Constant and reliable performers

## In step with our partners

Our customers know that their traction transformers have the best life cycle costs due to the lifetime service provided. We implement our expertise towards solving individual customer requirements with optimal state-of-the-art results. This includes, when technologically possible, breaking through the legal environmental requirements up to ABB standards of green technology resulting in reduced noise levels and emission. Only the best is good enough.

## *Solutions for extreme conditions*

## All-in-one solutions

Our multi-system transformers with superflat design and plug & play solutions focusing on key parameters provides our customers with the edge they need. ABB does not believe in resting on its laurels. Our R&D department is always optimizing our products and breaking fresh ground in the field of innovation. ABB, always on the move for a better tomorrow.
