"I am proud to bear the name of ONGC on my collar".  
**Mr. R S Sharma**,  
Director  
(Finance), after receiving the India CFO Award 2005.

PRINT

### *The most important intervention kicks off to a vibrant start*

**December 15, 2005**

This project covers 157 nos. offshore platform, 10 offshore rigs, 247 nos. Onshore installations, pipelines, two processing plants and 65 Onshore rigs. ONGC Board has accorded approval for this Mega Project a CAPEX of Rs. 330 crore along with OPEX of Rs. 100 crore towards post warranty AMC for 6 years.

Aptly put in by our C&MD as the most important intervention. Yes. You have guessed it right. A project of such magnitude could be none other than SCADA.

**ONGC should recognize**

Only the   
full-time  
MBAs

Also the good   
distance-MB  
A  
programmes  
like IGNOU

All MBA   
programmes,

as the contents are normally benchmarked

"Old age is not so bad when you consider the alternatives."  
~ Maurice Chevalier ~

**“SCADA is a very very crucial input for ONGC’s future. We earn our money from the well bore. Everything that happens, all the buildings, all the cars, all the prime returns they come from the well bore. If we cant manage the well bore, the flow in the well bore efficiently, everything else will get affected. So SCADA is important in managing the wells in the optimum efficient manner. Like ICE, we will have one SCADA, one ONGC, one control, throughout the corporation.” Said Mr. Raha at one of the forums in Mehasana.**

In line with this vision of C&MD, the Kick Off function of this prestigious project, which shall roll out amidst very challenging task, took off with lot of determination and enthusiasm.

**In his keynote address Dr. A K Balyan, Director (HR)** said that ONGC has undergone a large scale transformational change in past 4 years. All these changes were considered to gain competitive edge in E&P business. We have implemented CRC in HR front, ERP for business transactions, repository data base for exploration data. Process Control and boosting of operational efficiency by deploying the state -of -the Art - Technology has been a key to this E&P business.

He added that ONGC had implemented earlier SCADA System at Offshore for monitoring the status of few critical parameters but these systems have out lived their life performance.

However, today the real-time data is becoming part of management dynamics in reaching business conclusions along with other business data at hand.

Keeping this as an imperative, ONGC aims to take maximum advantage on deploying the State-of-the-Art-Technology in SCADA for leveraging the productivity and thereby profits. To achieve this goal, a void less SCADA coverage through out the Enterprise has been envisaged.
